Second Wind Air Purifier will destroy Type A Influenza including the Swine Flu (H1N1)

Second Wind has received various inquiries about the swine flu outbreak in Mexico. Second Wind units are designed to address airborne biological contamination.

Second Wind uses a patented process of photo-catalytic oxidation (PCO) and UV germicidal light. This process renders the virus or bacteria unable to reproduce. Second Wind units are specifically designed to give the maximum UV radiation dosage to completely alter the DNA/RNA of viruses of this type.

Second Wind units have a class II medical device (#k980745) status, registered with the EPA as a pesticidal device (#73112). Second Wind has done extensive independent testing on various similar agents and all testing has shown a dramatic reduction of the levels of the agents.

Please visit our web site [www.secondwindairpurifier.com](http://www.secondwindairpurifier.com) to view testing results and much more.

Second Wind UV units produce the highest UV intensity on the market today. Our Models 1910, 1930, 2000 Series, 3000 Series, 5000 Series, 9000 Series, 8000PFP and 7500PFP will produce the desired results in residential and commercial HVAC systems.

Second Wind Air Purifier is the leading manufacturer of patented UV / PCO air purification products for residential / commercial heating, ventilating and air conditioning systems.

For more information on the swine flu go to [www.cdc.gov/swineflu](http://www.cdc.gov/swineflu)
